SpectraPro750

Focal length	750 mm
Aperture ratio	f/9.7
Optical design	computer-optimized Czerny-Turner
Scan range	0 to 1400-nm mechanical range
Resolution	0.023 nm
Dispersion	1.1 nm/mm ±0.1 nm
Accuracy	
Repeatability	±0.05 nm
Drive-step size	0.0025 nm
Focal-plane size	27 mm wide x 14 mm high
Standard slits	adjustable from 10 µm to 3 mm wide; 4- or 14-mm slit heights; motorized (optional)
Grating size	68 x 68 mm; 68 mm x 84 mm (optional)
	Configuration
Grating mount	triple-grating turret
Grating turrets	interchangeable (standard)
Size	30 in (762 mm) long; 11 in (280 mm) wide; 8 in (203 mm) high; 4.12-in (105-mm) optical axis height
Weight	45 lb (20.5 kg)

Coude spectrograph

Coude spectrograph

- + High resolution (x10000-100000)
- + Stable spectrograph parameters .
- + Accurate line profile measurement
- High price (dome + spectrograph)
- Small spectral coverage (10 nm)
- Large variable intrinsic polarization (~10%)
- Already exists at Rhozhen Observatory

Cassegrain (or R-C) spectrograph

- + Small to medium resolution
- + Low cost → large number of gratings
- + Small, constant intrinsic polarization
- Flexure and flagging
- No high resolution measurements
- No high accurate profile measurements

Echelle spectrograph

- + High dispersion (resolution)
- + Wide wavelength coverage
- + Small in size
- + Low (relatively) cost
- High level of scattered light ($\sim 3\%$)
- Complicated reduction (e.g., tilted lines)
- Difficult profile measurements of strong lines
- Problems with extended objects spectra reduction
